Assessment Overview

Assessment encompasses the collection and evaluation of evidence regarding a student's learning. It plays a crucial role in teaching and learning, serving multiple purposes. Effective assessment can boost student engagement and motivation, especially when it encourages interaction among teachers, peers, and various resources.

Assessment provides valuable opportunities for teachers to gather evidence of student achievement relative to defined outcomes. It allows students to showcase their knowledge and skills, clarifies their understanding of concepts, promotes deeper learning, and confirms that their current understanding is a solid foundation for future learning.

New South Wales (NSW) syllabuses advocate for an integrated approach to teaching, learning, and assessment. The three key types of assessment are:

1. **Assessment for Learning**: This approach involves teachers using evidence about students' skills and understanding to guide their teaching. Often referred to as formative assessment, it typically occurs throughout the learning process to enhance clarity in student learning.
2. **Assessment as Learning**: In this approach, students take on the role of assessors of their own learning. They monitor their progress, ask reflective questions, and apply various strategies to evaluate what they know and how to leverage assessment for further learning.
3. **Assessment of Learning**, commonly referred to as summative assessment. This type of assessment is used to rank or grade students and typically occurs at key points in the learning cycle, such as the half Year and end of year, when students receive reports detailing their levels of skill, knowledge, and understanding achieved.

Both assessment for learning and assessment as learning share common elements, including self-assessment, peer assessment, and strategies that encourage students to actively monitor their own learning. Feedback, combined with evidence, helps teachers and students determine readiness for subsequent learning phases or identify areas requiring additional focus to strengthen knowledge, understanding, and skills.

It's important to note that not all tasks assigned to students will be assessment tasks. Students are expected to complete all assigned work, not just those designated for assessment.

Assessment Schedule Booklet and Time frames

This Assessment Booklet provides you with an assessment schedule for each of your subjects. Each assessment schedule lists for each task: type of task, ***approximate date*** (Term and Week), anticipated Areas of Learning to be assessed and weightings. At the conclusion of the subject assessment schedules in this Assessment Booklet is a Summary of Assessment Tasks – this will allow you to draw up your own diary of assessment tasks to assist you in managing and completing these tasks. If you have a problem with too many tasks scheduled at the one time, see your Year Adviser immediately.

Note that the dates listed in the assessment schedules and in the Summary of Assessment Tasks are APPROXIMATE.

Students will be informed by their teacher of the ACTUAL date and details of the assessment task at least TWO WEEKS before the task.

Note that the teacher notification has precedence over any information listed in the assessment schedules and Summary of Assessment Tasks contained in this Assessment Booklet – that is, details of assessment tasks listed in this Assessment Booklet (such as type of task, date of the task, Areas of Learning to be assessed, and weightings)

may change from the date of issue of the booklet, so the notification given by the teacher will be used to list the correct details for each assessment task.

Attendance

Attendance at all timetabled classes is compulsory, especially on days when assessment tasks are being conducted or submitted.

Students must provide an authorised reason for any absence, accompanied by a written note from a parent or caregiver.

It is the student's responsibility to catch up on missed work and to ascertain if any assessment tasks were set during their absence. No automatic extensions are granted for students who are absent on the day the notice of a task is given.

Submission of Tasks

For assessment tasks completed outside the classroom:

- A Statement of Authenticity and Academic Integrity, issued upon notification of the task, must be signed by the student and submitted with the completed assessment task.
- Students must follow the school's guidelines for Acknowledging Sources in Assessment Tasks.
- All tasks need to be submitted by the designated date and time specified by the teacher.

Tasks submitted after the designated time will be considered LATE, unless exceptional circumstances apply. Late submissions will incur the following penalties:

- A note will be sent home, and a copy will be placed in the student's central file and provided to the Year Adviser and Deputy Principals.
- Students will lose 20% of their marks per day until the task is submitted, with a maximum loss of 100% after five days. For example, a task due on Thursday and submitted the following Monday will incur an 80% penalty.

All faculties need to maintain a record of submitted tasks. Tasks must be submitted in accordance with the instructions from the faculty.

Extensions to Due Dates or Special Consideration

Extensions for completing tasks may only be granted by the appropriate Head Teacher. Students must apply well before the due date and extensions will only be considered for severe illness or other exceptional circumstances. If an extension is not granted, the task must be submitted on the due date, even if incomplete. Late submissions without prior approval will incur mark deductions.

Prior Knowledge of Absence

Students who have a school-related scheduling conflict (e.g., zone athletics) on the day of an in-class assessment must inform the relevant teacher or Faculty Head Teacher in advance. If a student anticipates being absent on the submission date of a hand-in assignment, the student needs to submit the assignment before or on the due date, where possible. If this cannot happen then a parent note outlining reasons needs to be handed in to the classroom teacher or subject Head Teacher.

Absence Due to Illness/Misadventure and Submission of Tasks

Students are responsible for submitting all assessment tasks on time. Absence on the due date does not constitute valid grounds for an extension unless exceptional circumstances arise. Students should aim to complete tasks to the best of their ability and parents need to inform the school immediately if circumstances prevent them from doing so. If a student is absent on the day of an assessment task, the parent should inform the school in writing of the reason for the absence, submitting this written notification to both the classroom teacher and the Front Office at the earliest opportunity. It is also recommended to obtain a doctor's certificate for the day(s) absent.

If a student is absent, the Head Teacher may:

- Authorise completion of the assessment task or an alternative task upon the student's return.
- Grant an extension of time.

- Determine an alternative mode of assessment.

Performance in an alternative task may be reviewed by the Subject Head Teacher if it does not match the student's previous performance or if the task's difficulty is not comparable to the original.

Technology and Assessment Tasks

Students must ensure all work is backed up and take reasonable precautions against technology failure, as it is not a valid reason for late submission. Students should:

- Regularly back up work on external storage.
- Save work on the school server.
- Verify that their software is compatible with school technology.

All electronic submissions must be checked in advance to ensure accessibility. Hard copies should ideally be printed at home to avoid last-minute issues. No mobile phones or technological devices are permitted during in-class assessments or major examinations.

Oral Tasks

Oral tasks usually comprise a written submission and an oral presentation. Written submissions must be handed in on time, and late submissions will incur penalties at the rate of 20% per day. Students must be present for their oral presentation on the designated day. If absent, they will be marked LATE unless exceptional circumstances apply.

Zero Marks

A ZERO mark may be awarded when a student:

- Submits a task more than five days late without a valid reason.
- Does not attempt a task (non-attempt).
- Does not make a serious attempt at a task.
- Engages in serious malpractice.

Parents/guardians will be informed in writing, and the notification will be placed in the student's central file.

Malpractice in Assessment Tasks

Each student's mark will reflect their own work. All sources must be acknowledged in accordance with the school's guidelines. Malpractice, including plagiarism, will not be tolerated and can lead to a ZERO mark. Examples of malpractice include:

- Cheating or assisting others to cheat.
- Copying or using materials without appropriate acknowledgment.
- Submitting work with significant contributions from others.
- In possession of a mobile phone or smart watch during a test

Students suspected of malpractice may be required to provide evidence of their own work.

Plagiarism

Plagiarism is a form of **malpractice** or **cheating**.

Plagiarism is presenting another person's work as your own work by copying or reproducing it without acknowledgement of its source.

Plagiarism includes, but is not limited to:

- substantial parts of your presented or submitted assessment task has been copied from the work of someone else
- your assessment task contains a substantial body of copied material (including from the internet) without acknowledgement of the source through correct referencing
- engaging another person to produce or conduct research for your assessment task.

Plagiarism is seldom an issue when students properly acknowledge the source of the material. When completing an assessment task outside the classroom, to avoid the risk of plagiarism, students need to do two things – use in-text references and complete a Reference List.
Students found to be guilty of plagiarism in an assessment task could receive **ZERO marks** for the task.

Artificial Intelligence

Using AI to complete assessment tasks may breach academic honesty and constitute malpractice. Students should produce original work to demonstrate their understanding and skills. Any work generated by AI may be considered plagiarism, potentially resulting in a ZERO mark.

Feedback

Feedback on assessment tasks will typically be provided within 2 school weeks after the task/assessment period is completed. Teachers will offer feedback during a nominated lesson, or across several lessons for more complex tasks.

Generally during feedback sessions, students are not allowed to have any writing apparatus on their persons.

Any queries related to marks must be raised with the teacher during that nominated feedback lesson, where the teacher will record the student's specific query, collect the paper and investigate the matter. A mathematical error can be addressed by the teacher in that lesson.

For queries related to marking, once all feedback lessons have been completed, the teacher(s) will review the queries without student presence, unless there are exceptional circumstances. The resolution of the query will be noted on the front page of the assessment task and there is the possibility that your mark could be adjusted either up, no change or down to ensure consistency with the marking criteria. No further correspondence or additional queries will be accepted after this feedback process. Once all queries have been finalised, student sign-off of mark accuracy will occur.

If a student is absent on the day of the feedback, the teacher may choose to schedule an additional feedback session. There is no expectation for a teacher to give you detailed 1:1 feedback. If the student has a query as to the marking, it must be raised during this session.

With extended response answers some faculties also use check marking, common script marking or double marking to provide consistency. These responses are generally not open to queries.

Disputes Regarding Assessment Tasks

Students have the right to discuss marks awarded in a task with their class teacher. If dissatisfied with the response, they should consult the Head Teacher on the day the task is returned.

Disability Provisions

Girraween High School adheres to NESA guidelines regarding Disability Provisions. Students with documented disabilities may apply for reasonable adjustments in assessments. Applications should be directed to the Deputy Principal.

Identification of Students with Disabilities

Students with diagnosed disabilities must provide documentation from a relevant professional. School counsellors may recommend students for Disability Provisions, which will be assessed by the Deputy Principal.

Disability Provisions and Modifications

Reasonable adjustments such as small group supervision, rest breaks, or specialised equipment will be provided as needed based on documentation.

Acknowledging Sources in Assessment Tasks

Referencing

Referencing is a method of acknowledging the variety of sources of information and ideas that you have used while completing assessment tasks outside the classroom. Its purpose is to acknowledge the original source of ideas and work that is not your own. Direct quotations, facts and figures, as well as ideas and theories, from both published

and unpublished works, must be referenced. Referencing is necessary to avoid plagiarism, to verify quotations and paraphrasing, and to enable readers (and markers) to follow up and read more fully the cited author's work.

Information that you are required to reference includes:

- quotations (exact words), or paraphrasing (information rewritten in your own words)
- ideas, arguments or specific information (such as statistics) proposed and developed by someone else.

The following types of sources do not need to be acknowledged:

- your own experiences or experimental results
- your original ideas, arguments or compositions
- common knowledge.

Common knowledge includes:

- facts that are commonly known (such as there are 12 months in a year)
- statements of facts that are easily available in a number of different kinds of sources (such as World War II began in 1939).

Referencing generally has two key elements:

- □ an in-text reference (that is, within the text of the assessment task) that indicates you have used a phrase, idea or concept from someone else
- □ a complete Reference List at the end of the assessment task giving full details of all sources referred to in the assessment task.

There are many referencing systems available. At Girraween High School, the **Harvard Style** of referencing is to be used when completing assessment tasks outside the classroom. If an assessment task is not referenced in the required format, you may be suspected of plagiarism.

All work presented in assessment tasks must be a student's own or must be acknowledged appropriately. Malpractice, including plagiarism, could lead to students receiving **ZERO marks** for that task.

Harvard Style Referencing Guide

In-text References

If you directly quote an author, discuss their ideas, research or paraphrase their text in your assessment task, you must provide an in-text reference (that is, within the text of your task) acknowledging their name, the year of publication, e.g. (Smith & Jones 2016)

You must then list all the references cited in your task, with full bibliographic details in alphabetical order, in your Reference List at the end of your task.

Quote

If you include a direct quote (word-for-word), the in-text citation must include the page number/s where the quotation appeared, e.g. … "correct referencing is a necessity" (Smith & Jones 2016, p. 16). Page numbers are also required when paraphrasing specific information.

When 30 or more words are quoted, quotation marks are NOT used. Instead, begin quoting the material on a new line and indent the text 5 spaces (use the Indent tool to keep all lines of the quote evenly indented) and include specific page number(s) in your in-text reference.

Paraphrase

This is where you use someone else's ideas, information, theories etc, but rewrite it in your own words. Note that no quotation marks are used here.

Example: *"*Satellites can be out into orbit around the Earth, the orbital velocity depends on the altitude above the Earth's surface." In other words, orbital velocity depends on the radius of orbit. (Warren 2008, p. 17)

Note

- When no author is available, cite the work by its title in both its in-text citation, e.g. (Smith 2009), and in the reference list. In the reference list, ignore articles such as "A", "An", and "The" when alphabetising by title.
- When no publication date is available, use n.d. (no date) in the place of the year, e.g. Smith (n.d.) notes that …

- If a DOI (Digital Object Identifier) is available for your source, place it at the end of the reference as shown in the journal article example below.

Creating a Reference List

Your references must appear at the end of your task in a new section entitled Reference List. The references listed are arranged alphabetically by author. Where a source has no author, it is cited by its title and ordered in the list alphabetically by the first significant word of the title. Start a new line for each reference.

A Reference List only includes material from sources such as books, journals and electronic sources, including the internet, which are cited within the assessment task.

For some courses, such as Stage 6 Society and Culture, a Bibliography may be required. A Bibliography is a list of relevant sources of all materials you read while preparing and writing your task, even if they were not all referenced within the actual assessment task. Your teacher will inform you if a Bibliography is needed and the format to be used.

English Assessment Schedule Year 7 - 2026

Type and Description of Task	Modes	Overall Weighting	Outcomes	Due Date
1. Voices of Protest **In-class Task - Persuasive Writing (30%)** This task will require students to compose an inspirational, persuasive speech related to the Voices of Protest unit.	Writing	30%	EN4-RVL-01 EN4-URB-01 EN4-ECA-01	**Term 1** **Week 9**
2. Myths **In class task - Narrative (30%)** This task requires students to write a narrative that is an appropriation.	Reading Writing	30%	EN4-RVL-01 EN4-URA-01 EN4-ECA-01	**Term 2** **Week 8 - 9**
3. Yearly Examination - Crime Fiction **In -class Task - Part A - (20%)** Students will be required to respond to an essay question on Agatha Christie's play The Mousetrap. **Part B- (20%)** - Students will complete a reading task, responding to unfamiliar texts.	Reading Writing	40%	EN4-RVL-01 EN4-URA-01 ENA-ECA-01	**Term 3** **Week 9**
		100%		

English Scope and Sequence Year 7 - 2026

Overview:

English 7–10 builds on the foundational skills developed in the earlier years to support the growing knowledge, understanding and skills in the areas of Reading, viewing and listening to texts, Understanding and responding to texts and Expressing ideas and composing text.

Term	Topic	Approximate Duration	Outline
1	Voices of Protest	10 Weeks	In this unit of work students will study texts thematically related to protest and environmental concerns. The unit will include a range of short texts such as poetry, song lyrics, multimodal texts, feature articles and essays to study English concepts such as argument, authority, perspective and point of view.
2	Myths, Hero's Journey. Percy Jackson and the Lightning Thief. R. Riordan.	10 Weeks	Texts: Rick Riordan, Percy Jackson and the Lightning Thief. Stephen Fry, Mythos and Fry's Heroes. English concepts to be explored through the novel and extracts from Stephen Fry include context, literary value and intertextuality.
3	Crime Fiction – The Mousetrap. A. Christie.	10 Weeks	Texts: Agatha Christie, The Mousetrap (Drama) and a short film from The Agatha Christie Hour collection. English concepts include genre, style, narrative, code and convention.
4	Poetry Reloaded	10 Weeks	Students will study a selection of poetry including a variety of traditional and contemporary forms. The English concepts include connotations, imagery and symbols, style and code and convention.

HSIE (Geography) Assessment Schedule Year 7 - 2026

Type and Description of Task	Overall Weighting	Outcomes	Due Date
Landscapes and landforms Site Study Students will complete a skills task looking at maps, graphs and other geographical data.	25%	4-1, 4-2, 4-4, 4-8	Term 1, Week 7
Place and Liveability Students will research to complete an in-class essay.	25%	4-1, 4-2, 4-7, 4-8	Term 2, Week 3
Water in the World Students will research and submit a response.	25%	4-1, 4-2, 4-4, 4-8	Term 3, Week 7
Interconnections Research task Students will research to complete an in-class written response.	25%	4-1, 4-2, 4-7, 4-8	Term 4, Week 3
	100%		

HSIE Scope and Sequence

Year 7 - 2026

Overview: Students learn about the importance of places and their characteristics such as factors influencing perceptions, special significance, location and spatial distribution, global water resources, and natural hazards. They study how geographical phenomena develop over time, including changes to resources, landscapes, and places due to natural and human processes.

Term	Topic	Approximate Duration	Outline
1	**Landscapes and Landforms**	10 Weeks	Students will explore landscapes and landforms using examples from Australia and throughout the world. They explain processes that create landscapes and shape individual landforms and they describe the value of landscapes and landforms to different people. Students examine issues of land degradation and ways to manage and protect landscapes and landforms. Students also investigate a natural hazard associated with landscapes and people's responses to that hazard.
2	**Place and Liveability**	10 Weeks	Students will research one city to complete an in-class essay. Students discuss factors that influence people's perceptions of the liveability of places. They investigate features and characteristics of places across a range of scales that support and enhance people's wellbeing such as community identity, environmental quality and access to services and facilities. Students assess the liveability of places and propose strategies to enhance the liveability of a place in Australia.
3	**Water in The World**	10 Weeks	Students examine water as a resource and the factors influencing water flows and availability of water resources in different places. They investigate the nature of water scarcity and assess ways of overcoming it. Students discuss variations in people's perceptions about the value of water and the need for sustainable water management. Students also investigate processes that continue to shape the environment including an atmospheric or hydrologic hazard.
4	**Interconnections**	10 Weeks	Students focus on the connections people have to places across a range of scales. They examine what shapes people's perceptions of places and how this influences their connections to places. Students explore how transport, information and communication technologies and trade link people to many places. They explain the effects of human activities, such as production, recreation and travel, on places and environments in Australia and across the world and investigate sustainability initiatives and possible futures for these places.

Languages Assessment Schedule

YEAR 7 - 2026

Type and Description of Task	Overall Weighting	Outcomes	Due Date
Cultural Research: Students will access digital texts to find information on languages and culture. This task will be presented as a hand-written poster.	10%	ML4-UND-01 10%	**Term 1** **Week 8**
Oral presentation Students will write and present a short self-introduction in Japanese.	30%	ML4-CRT-01 15% ML4-INT-01 15%	**Term 2** **Week 2**
Writing and Speaking Students will work in pairs to create and present a role play at a café.	30%	ML4-CRT-01 15% ML4-INT-01 15%	**Term 3** **Week 6**
Written Paper on Language and Culture Content from all 3 Languages will be assessed: Japanese, French and Korean	30%	ML4-UND-01 30%	**Term 4** **Week 4**
NB: Different classes will be doing different languages	**100%**		

Languages Scope and Sequence Year 7 - 2026

Overview:

A student:

- Exchanges information and opinions in a range of familiar contexts by using culturally appropriate language
- interprets and responds to information, opinions and ideas in texts to demonstrate understanding
- creates a range of texts for familiar communicative purposes by using culturally appropriate language

Term	Topic	Approximate Duration	Outline
1=2	Japanese Romaji Taster Course	14 weeks	Culture, Country and Language Scripts, Gestures, Greetings, Anime Personal Information: Names, Numbers, Ages, Hobbies, Animal Zodiac, Colours
2-3	French Taster Course	13 weeks	Country and Culture: Introduction to France, impact of French Culture Greetings, Names, How are you, Number, Ages, Colours, Food and Drinks, Likes and Dislikes, Ordering food and drinks, Eating out Classic Comedy Film
3-4	Korean Taster Course	13 weeks	Introduction to Korea, Korean Culture, Korean Pop, Greetings, Names, How are you, Nationalities, Numbers, Ages, Colours, Food and Drinks, Likes and Dislikes Korean Film

Mathematics Assessment Schedule Year 7 - 2026

Type and Description of Task	Skills	Knowledge	Overall Weighting	Outcomes	Due Date
1. Test: 50-minute In Class test No Calculator allowed	5%	5%	10%	Number and Algebra	**Term 1** **Week 7**
2. Test: 50-minute In Class test No Calculator allowed	5%	5%	10%	Number and Algebra, Measurement and Geometry, Statistics and Probability	**Term 2** **Week 4**
3. Test: 50-minute In Class test No Calculator allowed	15%	15%	30%	Number and Algebra, Measurement and Geometry, Statistics and Probability	**Term 3** **Week 6**
4. Yearly Examination: 70-minute test Calculator allowed *(plus 20 minutes non calculator)*	25%	25%	50%	Number and Algebra, Measurement and Geometry, Statistics and Probability	**Term 4** **Week 3 & 4**
	50%	**50%**	**100%**		

Mathematics Scope and Sequence Year 7 - 2026

Overview: A student develops understanding and fluency in Mathematics through:

- exploring and connecting mathematical concepts
- choosing and applying mathematical techniques to solve problems
- communicating their thinking and reasoning coherently and clearly.

Term	Topic	Approximate Duration (Weeks)	Outline
1	Integers	4	compares, orders and calculates with negative integers to solve problems
	Linear relationships Part 1	2	graphing ordered pairs on the number plane
	Whole numbers	3	factors, multiples, prime & composite numbers
	Fractions, decimals and percentages	4	represents and operates with fractions, decimals and percentages to solve problems
2	Probability	2	solves problems involving the probabilities of simple chance experiments
	Length, area and Volume	4	Perimeter, circumference, area of composite shapes, different views of prisms and solids
	Algebra	2	generalises number properties to operate with algebraic expressions
3	Linear Relationships Part 2	1	Graphs simple linear relationships on the number plane
	Equations	1	solves linear equations of up to 2 steps
	Angle relationships	2	applies angle relationships to solve problems (angles at a point & parallel lines)
	Ratios, Rates & Time	4	Solves problems involving ratios, rates and time
	Displaying Data	3	Displaying data on statistical graphs and infographics
4	Geometrical Figures	3	Solves problems using angles in triangles and quadrilaterals
	Percentages	3	solves problems using percentages
	Probability	2	Solves probability problems including Venn diagrams and two way tables

Music Assessment Schedule Year 7- 2026

Type and Description of Task	Performance	Composition	Listening	Overall Weighting	Outcomes	Due Date
1.Ukulele Performance Students will present two ukulele songs	30%			**20%**	MU4-PER-01	**Term 1 Week 9**
2. Composition Students will compose a short piano solo and perform it.	5%	15%		**20%**	MU4-COM-02	**Term 2 Weeks 3-4**
3. Singing performance Students will prepare a song for performance in small ensembles	30%			**30%**	MU4-PER-01	**Term 3 Weeks 7 & 8**
4. Yearly Test Students will sit a written test involving listening examples .			20%	**20%**	MU4-LIS-01	**Term 4 Weeks 2 & 3**
	65%	**15%**	**20%**	**100%**		

Music Scope and Sequence - Year 7 2026

Overview: Students will learn several instruments during the year, and study the Concepts of Music. We will look at the four orchestral families and see how the orchestra developed from 1600- 1900. Students will also learn about singing techniques and participate in ensemble singing.

Term	Topic	Indicative Duration	Outline
1	Ukulele & the Concepts of Music	10 weeks	Students will learn simple ukulele chords and practice two songs for assessment. The concepts of Music will be introduced also. Students will compose a melody using music software for a solo instrument
2	The Orchestra	10 weeks	This topic will cover the orchestral instruments, and a brief history of the orchestra.
3	Singing & the Voice	10 weeks	Students will learn the different singing techniques and prepare a song for performance in small ensembles. They will compose a melody for two instruments on the Music software
4	Guitar	10 weeks	Students will learn simple guitar chords and how to read guitar tabs.

Personal Development, Health and Physical Education (PDHPE) Assessment Schedule Year 7- 2026

Type and Description of Task	Skills	Knowledge	Overall Weighting	Outcomes	Due Date
1. Practical Assessment (Sem 1) Practical assessment is ongoing and will be periodically assessed in relation to the sports that are being conducted throughout the semester.	15%	10%	25%	PD4-11 PD4-5	Semester 1 Continuous
2. Health Task & Class Work In class assessment based on Semester 1 content. Classwork will be monitored continuously throughout the semester.	15%	5%	20%	PD4-1 PD4-9 PD4-2	Term 1 Week 7
3. Practical Assessment (Sem 2) Practical assessment is ongoing and will be periodically assessed in relation to the sports that are being conducted throughout the semester.	15%	10%	25%	PD4-4 PD 4-10	Semester 2 Continuous
4. Health Examination & Class Work Yearly 1 & 2 content. The examination evaluates comprehensive course content and learning outcomes, encompassing student skills, knowledge, and conceptual understanding. Topics include the entire Year 7 curriculum.	15%	15%	30%	PD4-2 PD4-6 PD4-7 PD4-8 PD4-3	Term 3 Week 8
	60%	**40%**	**100%**		

Personal Development, Health and Physical Education (PDHPE) Scope and Sequence - Year 7 - 2026

Overview:

The Personal Development, Health and Physical Education (PDHPE) subject provides a strengths-based approach towards developing the knowledge, understanding and skills students need to enhance their own and others' health, safety, wellbeing and participation in physical activity in varied and changing contexts. The syllabus provides opportunities for students to develop self-management, interpersonal and movement skills to help students become empowered, self-confident and socially responsible citizens.

Term	Topic	Approximate Duration	Outline
1	Road Safety	10	This unit educates students on vital aspects as road users including pedestrian and bicycle safety, road rules, and responsible technology use. Students engage in practical scenarios, fostering a deep understanding of safe road navigation. Emphasis is on lifelong skills for personal and community well-being.
2	Changes and Challenges	11	This unit focuses on physical, emotional, and social changes, fostering an understanding of puberty's impact. Through open discussions, informative resources, and supportive activities, students navigate challenges with resilience. The unit addresses body image, self-esteem, and interpersonal dynamics, promoting a healthy perspective on individual growth. By the unit's end, students emerge equipped with knowledge and coping skills, embracing the journey through puberty with confidence and a sense of self-awareness.
3	Healthy Lifestyle	10	This unit emphasizes the pivotal role of nutrition in overall well-being. Students delve into understanding food groups, making nutritious choices, and deciphering food labels. Health literacy is woven into the fabric of the unit, empowering students to critically assess health information. Practical activities, meal planning, and discussions foster skills to navigate a complex nutritional landscape. By cultivating health literacy, students not only adopt healthy eating habits but also gain the tools to make informed choices, promoting lifelong well-being.
4	All About Me	10	In this unit students delve into the facets of personal identity, including cultural, social, and individual dimensions. The unit fosters a supportive environment for embracing diversity and building empathy. By the end, students gain a deeper understanding of themselves and their peers, cultivating a foundation for positive relationships and a strong sense of identity as they navigate the complexities of adolescence.

Science Assessment Schedule Year 7 - 2026

Type and Description of Task	Working Scientifically Skills	Knowledge and Understanding	Overall Weighting	Outcomes	Due Date
Working Scientifically Skills Task This task assesses students' achievement of the Working Scientifically Skills. This includes questioning and predicting, planning and conducting investigations, processing and analysing data and information, problem solving, and communicating scientifically.	15%	5%	20%	SC4-7WS – - SC4-9WS	**Term 1, Week 8**
Half Yearly Examination This task is a formal written examination comprising objective response questions and questions that require students to write short and extended responses. The task assesses a broad range of course content and outcomes, including skills in working scientifically.	10%	15%	25%	SC4-7WS – SC4-9WS, SC4-10PW, SC4-14LW	**Term 2, Week 6**
Student Research Project Validation Test Students will design and carry out an independent investigation of a scientific inquiry. Their assessment will then be a validation test on the design of the experiment, collection of results, conclusions/findings.	25%	0%	25%	SC4-4WS - SC4-9WS	**Term 3, Week 8**
Yearly Examination This task is a formal written examination comprising objective response questions and questions that require students to write short and extended responses. The task assesses a broad range of course content and outcomes, including skills in working scientifically.	10%	20%	30%	SC4-7WS – SC4-9WS, SC4-12ES, SC4-14LW, SC4-15LW	**Term 4, Week 3**
	60%	**40%**	**100%**		

Science Scope and Sequence Year 7 - 2026

Overview:

Studying Science in Years 7–10 gives students a broad understanding of the natural world through the major branches of Biology, Chemistry, Physics, and Earth and Space Science. Students explore living systems, matter and reactions, energy and motion, and the Earth's processes and place in the universe. Across all topics, they develop essential scientific skills such as planning investigations, analysing data, problem-solving, and communicating scientifically. This foundation builds curiosity, scientific literacy, and confidence to understand and engage with real-world issues.

Term	Topic	Approximate Duration	Outline
1-2	**Observing the Universe**	10 weeks	"Observing the Universe" introduces students to how scientific observations help us understand space, including the Earth–Sun–Moon system and astronomical cycles such as day/night, seasons, Moon phases and eclipses. Students learn how technologies like telescopes and satellites support observations and deepen our knowledge of the Universe. They investigate how models of the Solar System have changed over time as new evidence has emerged. The topic builds students' skills in making careful observations, asking scientific questions and analysing data. Overall, it highlights how evidence-based reasoning allows scientists to explain phenomena we see in the sky.
2	**Forces**	10 weeks	The Forces topic introduces students to pushes, pulls, friction, gravity, electrostatic forces and magnetism, and how these influence the motion or shape of objects. Students learn how unbalanced forces can start, stop or change the direction of motion, while friction and similar forces oppose movement. They explore forces that act at a distance, such as gravity and magnetism, and how these appear in everyday life. The topic also examines how technologies like helmets, seatbelts and safety equipment use scientific principles of forces to protect people. Through investigations, students develop skills in observing, measuring and explaining the effects of different forces.
3	**Cells and Classification**	10 weeks	The Cells and classification topic introduces students to the idea that all living things are made of cells, which are the basic units of life. Students learn to identify different cell structures (like nucleus, cytoplasm, cell membrane, cell wall, and chloroplasts in plant cells) and describe their functions. They explore how unicellular and multicellular organisms differ, and how specialised cells form tissues, organs and systems in multicellular organisms. The topic also covers how living things are classified based on structural features, using classification systems (kingdom, phylum, class, order, family, genus, species) and simple identification keys. Through observations and investigations, students develop scientific skills in identifying patterns, comparing organisms, and understanding biodiversity.
4	**Solutions and Mixtures**	10 weeks	The Solutions and mixtures topic introduces students to how matter can exist as pure substances or mixtures, and distinguishes between solutions (uniform mixtures) and other types of mixtures. Students learn about solutes, solvents and how soluble substances dissolve to form solutions — while some substances remain undissolved and create suspensions. They explore how physical separation techniques like filtration, evaporation, distillation and chromatography can be used to separate mixtures into their components. The topic shows why these processes are important in everyday life, industry, water purification and environmental contexts. Through experiments and investigations, students practise "working scientifically" — observing, measuring, separating, and explaining how mixtures behave and can be separated.

Technology Mandatory - Materials - Assessment Schedule Year 7 - 2026

Type and Description of Task - Each class will complete both units of work. Some classes will complete Materials and Production Processes in Semester 1 and Digital and Communication Technologies in Semester 2. Other classes will complete Digital and Communication Technologies in Semester 1 and Materials and Production Processes in Semester 2.	**Overall Weighting**	**Outcomes**	**Due Date**
Project A Timber OR Project B **Mixed Materials Materials and Production Processes Semester 1 or 2. Duration of unit: 20 weeks** **Project A:** Students will engage in mini projects and skill development tasks to prepare for the construction of a timber project. **OR** **Project B:** Students will be introduced and engage in mini projects and skill development tasks to prepare for the construction of a mixed materials project.	25%	TE4-DES01, TE4-PPM01 TE4-SAF01	Semester 1 T2W4 Semester 2 T4W4
Project Report - Materials and Production Processes Students will create a detailed project report that documents various stages of design, production and evaluation of the project they have created (either Project A or Project B)	20%	TE4-SDP01, TE4-PDP01, TE4-MSC01, TE4-DES01,	Semester 1 T2W4 Semester 2 T4W4
Coding Modules - Digital and Communication Technologies. Semester 1 or 2. Duration of unit: 20 weeks Students will be introduced and engage in mini modules and skill development in programming using the python language. Students will be observed and assessed as they develop these skills in programming.	25%	TE4-SDP01, TE4-DES01, TE4-PPM01 TE4-SAF01 TE4-DIG01 TE4-DIG02	Semester 1 T2W4 Semester 2 T4W4
Coding Project Game - Digital and Communication Technologies. Students will use the skills developed in programming to plan and manage the development of a small game involving branching, iteration and functions. They will develop a functioning user interface.	20%	TE4-SDP01, TE4-DES01, TE4-PPM01 TE4-SAF01 TE4-DIG01 TE4-DIG02	Semester 1 T2W4 Semester 2 T4W4
Yearly Exam Students are examined on content from the Materials and Production Processes (MaPP) and Digital Communication Technologies (DCT) units of work. One exam only in Term 4.	10%	TE4-SDP01 TE4-PDP01 TE4-SAF01	Term 4 Week 2
	100%		

Technology Mandatory - Materials - Scope and Sequence Year 7 -2026

Overview

The **Materials and Production Processes** module focuses on the application of specialist skills and techniques in relation to a broad range of traditional, contemporary and advancing materials and processes. Students develop knowledge and understanding of the characteristics and properties of a range of materials through research, experimentation and practical investigation, and when they make products to satisfy identified needs and opportunities. Students will make either Project A or Project B in term 1 depending on workshop allocation and the other project will be made during term 2.

The **Digital and Communication Technologies** module encourages students to develop an empowered attitude towards digital technologies and implement and evaluate digital solutions. Students are given the opportunity to become innovative creators of digital communication technologies.
Students are provided with opportunities to develop fluency in a general-purpose programming language and use these skills to solve information problems.

Topic	Approximate Duration	Outline
Project A Timber Project Term 1 or 2	10 Weeks	Students learn about workshop safety and complete safety tests. Students design and complete sketches of a timber project. Students learn about woodwork tools, joining methods, adhesives and basic machines. Students construct their timber project and apply an appropriate surface finish to their project. Students will produce a structured project report for this project.
Project B Mixed Materials Project Term 1 or 2	10 Weeks	Students learn about metal workshop safety and complete safety tests. Students design a mixed materials project. Students learn about metalwork tools, working with acrylic, CAD software and machines. Students construct their mixed materials project. Students apply an appropriate finishing technique to their project. Students will produce a structured project report for this project.
Yearly Exam	1 period	Students will be examined on outcomes TE4SDP01 and TE4 PDP01 in a formal exam situation. It will be relevant to the Materials and Production Processes unit of work.
Topic	**Approximate Duration**	**Outline: Digital and Communication Technologies (Semester 1 or 2)**
Coding	17 Weeks	Students engage with progressively challenging Python coding levels using Code Combat. Focus on developing algorithmic thinking, syntax, debugging, and problem-solving skills. Emphasis on safe and responsible use of digital systems (TE4DIG01, TE4DIG02). Students apply project planning and management principles as they learn through structured coding challenges (TE4PPM01, TE4SAF01).
Coding Project Game	3 Weeks	Students design, code, and produce a computer game using Python, applying skills gained from Code Combat. Project includes planning, managing production stages, safe use of technologies, and demonstrating technological literacy in a digital environment (TE4PPM01, TE4SAF01, TE4DIG01, TE4DIG02). Final product reviewed to ensure understanding of coding concepts and project completion skills.
Yearly Exam	1 period	Students will be examined on outcomes TE4SDP01 and TE4 PDP01 in a formal exam situation. It will be relevant to the Materials and Production Processes unit of work.

Visual Arts Assessment Schedule Year 7- 2026

Type of Task and Description	Practical	Art History Criticism	Overall Weighting	Outcomes	Due Date
Task 1 Artmaking A 2-Dimensional artwork based on the School Environment.	30%		30%	VA4-AMV-01 VA4-AMP-01	**Term 1** Week 10
Task 2 Art critical and historical studies Topic Test on the Elements of Art		10%	10%	VA4-CHV-01	**Term 2** Week 2
Task 3 Artmaking Art critical and historical studies Sculptural work and Artist Practice Research Task	35%	5%	40%	VA4-CHP-01 VA4-AMV-01 VA4-AMP-01 VA4-AMC-01	**Term 3** Week 4
Task 4 Art critical and historical studies Yearly Examination on course content areas studied		20%	20%	VA4-CHV-01 VA4-CHP-01	**Term 4** Week 2
	60%	**40%**	**100%**		

Visual Art Scope and Sequence

Year 7 - 2026

Overview:

- Students will build on their knowledge from Stage 3, further exploring the Elements of Art through the study of key Australian Artists.
- Students will be introduced to Structural, Subjective, Cultural and Postmodern frames and connections in the Artworld.

Term	Topic	Approximate Duration	Outline
1	This is our school	10 weeks	Students will create an artwork based around the building blocks of art (line, texture, tone, perspective, shape, colour). They will be introduced to a variety of artists that incorporate the theme of Place, including Aboriginal artist Lin Onus. Students will be introduced to printmaking techniques and will develop foundational drawing techniques. Students will explore art viewpoints through the work of Joy Hester. Student will exhibit their works in the annual school exhibition.
2	Symbols and stories in Art	10 weeks	Students will explore how art reflects belief systems, culture, spirituality, and iconography to enhance their understanding of diverse worldviews. Beginning with Aboriginal and Torres Strait Islander histories they will then study the Hermannsburg potters and Vincent Namatjira. Students will examine global visual motifs and create a painted ceramic piece expressing personal symbolism. They will engage in experiments where they learn about colour mixing and creating tone. They will apply colour theory and learnt painting techniques to paint their ceramic artwork.
3	Light up the city	10 weeks	Students will develop watercolour painting techniques in a series of experiments in their art diary. They will create a painting of an Architectural Landmark inspired by Australian Artist Howard Arkley's style. As an extension to this, students will create an abstract artwork based on their architectural form.
4		10 weeks	Students will study artists that use various perspectives in their works and learn how to draw using 2 and 3-point perspective. They will explore how to develop tone and texture using a variety of drawing mediums and techniques. Students will develop two perspective drawings of cityscapes related to their architectural landmark subject matter in different mediums.

Summary of Year 7 Assessment Tasks

Note that the dates listed in this summary are APPROXIMATE.

Students will be informed by their teacher of the ACTUAL date and details of the assessment task at least TWO WEEKS before the task.
